

Vehicle Mileage & Reservation Tracker

Excel/VBA operational application | Independently designed and built end to end by Charles Monsanto

BUSINESS PROBLEM

Small fleets are often coordinated across disconnected spreadsheets, calendars, and messages. That fragmentation makes booking conflicts, dated vehicle status, controlled corrections, and consistent reporting difficult to manage.

DELIVERED SOLUTION

- One controlled desktop workflow for mileage, reservations, maintenance history, and management reporting.
- Pre-write validation for required fields, dates, times, vehicles, drivers, odometers, conflicts, and maintenance state.
- Recent-entry edit and delete workflows that recalculate dependent odometers, metrics, and reports.
- Protected generated sheets with approved dashboard actions preserved for routine use.

EDIT RESERVATION

Synthetic dashboard view: entry, maintenance, correction, and reporting controls.

INDEPENDENT OWNERSHIP

Charles Monsanto owned requirements discovery, workflow and control design, VBA implementation, reporting, test design, privacy sanitization, and public-release documentation. The result is a reviewable application, not a presentation-only prototype.

LIGHTWEIGHT ARCHITECTURE

Structured Excel ListObject tables provide the local data store. Thin worksheet event modules dispatch actions to three standard VBA modules. No server, external database, add-in, API, or data connection is required.

FRI	7/24		Shop - Central Garage		
SAT	7/25		Shop - Central Garage		

Weekly schedule: timed bookings and dated unavailability.

RESERVATION LOGIC

- Single-day and inclusive multi-day bookings; one associated row per vehicle-date.
- Multiple same-day bookings are allowed when time intervals do not overlap.
- Half-open [start, end) boundaries permit adjacent bookings; actual overlaps are blocked.

July 2026 TOTALS:		5	480	2	225	4	440	3	310
CUMULATIVE MILEAGES:		Ending Mileage	52,480	Ending Mileage	41,925	Ending Mileage	28,740	Ending Mileage	63,110

Monthly history: trips, ending odometers, mileage, and status.

CONTROLLED CORRECTIONS

- Recent mileage and reservation records load back into dashboard controls.
- Grouped multi-day edits expand, contract, or move ranges after conflict revalidation.
- Grouped deletion removes all associated dates; mileage changes recalculate retained odometer history.

MAINTENANCE + REPORTING

- Dated maintenance intervals block affected reservations and preserve history after return to service.
- Outputs include weekly schedules, monthly mileage, trip counts, scheduled hours, fiscal-year totals, and status.
- Targeted refreshes update only the outputs affected by a transaction.

RELEASE VERIFICATION

Regression coverage includes startup and navigation; mileage save/edit/delete and odometer recalculation; single-day, multi-day, grouped correction, and boundary reservations; maintenance conflicts and history; report synchronization; formula-error scanning; package integrity; and restoration of Excel events, calculation, and screen updating on success and error paths.

PRIVACY All shown vehicles, people, identifiers, mileage, purposes, locations, and maintenance events are synthetic. No organization data, branding, confidential records, or external data connections are included.

REVIEW THE IMPLEMENTATION

<https://github.com/cbmons4/vehicle-mileage-reservation-tracker>

The repository includes the macro-enabled demonstration workbook, complete plain-text VBA export, architecture notes, test coverage, and these sanitized screenshots. No measured business time or cost savings are claimed.
